SUMMARY

Software architect with 11 years building and modernizing systems in healthcare, public-sector and defense. Designed device authentication for ~29K point-of-care devices, re-architected PDF generation into a containerized Azure service, and drove .NET 10 modernization and AI-assisted testing that lifted company-wide coverage from 39% to 77%. Leads by writing the standards and the first implementation.

SKILLS

Languages: C#, TypeScript, JavaScript, Kotlin, Java, Python, SQL, Bash, PowerShell

Platforms: .NET (Framework through .NET 10), ASP.NET Core, Node.js, Next.js, Electron, Android SDK

Cloud & Data: Azure (App Service, Functions, API Management, Application Insights), Docker, SQL Server, Redis, RabbitMQ / CloudAMQP

Delivery: GitHub Actions, Azure DevOps, GoCD, Datadog, OpenTelemetry, KQL

Infrastructure: Proxmox, Unraid, Docker Compose, Traefik, Cloudflare Tunnel, UniFi VLAN networking, restic backups

Security: Request signing (Ed25519, JWT), SSO / OAuth (Authentik), HIPAA / PHI controls, STIG and FIPS 140-2

AI: Claude Code, GitHub Copilot, AI-assisted testing, LLM cost governance

Practices: ADRs and RFCs, architecture review boards, event-driven architecture, CQRS, Kanban

EXPERIENCE

VaxCare Corporation Orlando, FL — Apr 2019 – Present

Software Engineer → Senior Software Engineer (2019) → Mobile Team Lead (2022) → Application Architecture Team Lead (2025)

Application Architecture Team Lead — Jan 2025 – Present

- Lead a team of 4 engineers that owns application architecture, modernization and cross-team engineering standards for VaxCare's point-of-care vaccine platform. Set the multi-year architecture roadmap after working sessions with 9 engineering teams.
- Designed and built a device-authentication service (Ed25519 request signing, per-device revocation) that now secures all ~29K active point-of-care devices, as an in-budget alternative to a commercial vendor.
- Own engineering's generative-AI adoption program (Claude, GitHub Copilot). Grew a 20-seat pilot to 34 people across development, QA, DevOps and security, with model-tier guidance, usage audits and an ongoing training series.
- Led an AI-assisted unit-testing pilot that raised code coverage across the company's entire codebase from 39% to 77% in eight months.
- Re-architected PDF generation from VM-hosted Chromium processes to a containerized Node.js service on Azure App Service. Output is byte-identical and latency ~18% lower at peak load; now running in production as an A/B rollout.
- Lead the team's execution of the company's #2 priority: moving messaging from self-hosted RabbitMQ to managed CloudAMQP, using federation to avoid downtime (completion expected early 2027). Also lead .NET 10 modernization across teams on a standard service template.
- Wrote the team's PR review standard (12-working-hour SLA) and RFC/ADR process, and moved the team to Kanban with shared ownership. Interview and onboard engineers, and coach them to present at the architecture review board.

Mobile Team Lead — Aug 2022 – Dec 2024

- Led the Mobile team as it grew from 3 to 8 engineers.
- Owned the rollout of the VaxHub2 Android point-of-care tablet, from procurement through development and maintenance, with several hardware suppliers and contractors. Launched the MobileHub product line; together they make up ~29K devices in the field.
- Maintained the legacy VaxHub1 tablet, automated vaccine replenishment, over-the-air updates, and internal support and inventory tools (C#, Kotlin, Java, .NET Core, SQL Server).
- Selected the next-generation tablet hardware and planned the move to the UnifiedHub device and Jetpack Compose.

Senior Software Engineer, Platform Operations — Dec 2021 – Jul 2022

- Helped stand up the new Platform Operations (DevOps) team, defining access rights, roles and accountability. Wrote runbooks, SOPs and escalation workflows for consistent incident response and deployments.

Senior Software Engineer, Solutions Team Jan 2021 – Nov 2021

- Researched and prototyped a pre-visit patient outreach program that delivered a six-figure return in its first flu season, well above executive projections.
- Designed a facial recognition application that worked within the limits of existing hardware and connectivity, as part of a research-and-design team turning executive ideas into documented prototypes.

Software Engineer → Senior Software Engineer, Inventory Team Apr 2019 – Dec 2020

CentralSquare Technologies Lake Mary, FL Mar 2018 – Apr 2019

Software Engineer

- Led developers and QA delivering roadmap items across a 10M-line codebase (C#, .NET, C, C++, COBOL, TypeScript, Angular).
- Led the voice-application team building Alexa skills in C#.
- Led a team resolving bugs and support requests across the front end, and built tools that sped up development and agile paperwork (C#, .NET Core, VSTS).

Leidos Orlando, FL May 2015 – Mar 2018

Software Engineering Intern → Software Engineer (2016)

- Established the "Suitcase Cloud" platform: encrypted virtual-machine datastores and abstracted networking for vSphere, FIPS 140-2 compliant (Java, Bash, Python).
- Automated STIG implementation for a multi-tier network application stack (Python).
- Maintained and improved an application for rapidly provisioning virtualized environments. Extended the CyberNEXS platform (Java) and supported its events and sales presentations.
- Managed a small team supporting several research projects. Built a regression-testing application for EDS CDPE (Java, Selenium, JavaScript).

University of Central Florida, Burnett Honors College Orlando, FL Jan 2015 – Jun 2015

Software Development Intern

United States Air Force Jul 2005 – Jun 2013

Supervisor, Survey and Drafting (Staff Sergeant)

- Supervised and trained 15 personnel supporting drafting, land surveying and mapping (AutoCAD, ArcGIS) for a base population of 5,000+.
- Built Python tools for geometric data and an aircraft generation, status and notification website.

PROJECTS

- **Contributor, irDashies** (open-source iRacing overlays; Electron, TypeScript; a 260+-star project). 17 merged PRs in 2026: Delta Speed and in-car adjustment widgets, per-session layouts, per-widget URLs for VR and OBS, and a test suite that replays captured telemetry.
- **Chasing the Delta** (iRacing driver academy and league). Lead developer. 55 merged PRs hardening the Next.js / Payload CMS site (access control, personal-data exposure, XSS and open-redirect fixes, a containerized local stack). Also maintain the community's Discord bots.
- **Homelab.** Proxmox and Unraid hosts running 14 Docker Compose stacks, managed in self-hosted Gitea with Renovate updates and daily drift alerts. Traefik and Cloudflare Tunnel ingress behind Authentik SSO, segmented UniFi VLANs with an isolated SSH honeypot, and nightly restic backups to Backblaze B2.
- **iracingstats.** A self-hosted iRacing career-stats site (standard-library Python, Docker).

EDUCATION

University of Central Florida Orlando, FL 2015

B.S. Computer Science

- National Collegiate Cyber Defense Competition Champion, 2014
- Treasurer, HackUCF, 2015
